TITLE
 Submitted (14-APR-2004) Yoshihide Hayashizaki, The Institute of

Physical and Chemical Research (RIKEN), Laboratory for Genome
 Exploration Research Group, RIKEN Genomic Sciences Center (GSC),
 RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,
 Kanagawa, 230-0045, Japan (E-mail:genome-res@sc.riken.jp,
 URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222,
 Fax:81-45-503-9216)

CDNA library was prepared and sequenced in Mouse Genome
 Encyclopedia Project of Genome Exploration Research Group in Riken
 Genomic Sciences Center and Genome Science Laboratory in RIKEN.
 Division of Experimental Animal Research in Riken contributed to
 prepare mouse tissues.

Tissues were provided by Dr. John Todd (Dept. of Medical Genetics
 Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome
 Trust/MRC building Addenbrookes Hospital Cambridge) whose
 assistance we gratefully acknowledge.
 Please visit our web site for further details.

Direct Submission

Submitted (14-APR-2004) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail: genome-res@gs.riken.jp, URL: http://genome.gsc.riken.jp/, Tel: 81-45-503-9222, Fax: 81-45-503-9216)

cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in Riken Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.

Please visit our web site for further details.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

COMMENT
NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing;
Research Association for Biotechnology; cDNA library construction,
5'- & 3'-end one pass sequencing; Department of Virology and Human
Genome Center, Institute of Medical Science, University of Tokyo
(partially supported by Science and Technology Agency).

Direct Submission
Submitted (30-AUG-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Sep 1, 1999 this sequence version replaced gi:5757565.
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email
gc-help@bcm.tmc.edu
CLONE LENGTH: This sequence does not necessarily represent the
entire insert of this clone. Overlapping regions of clones are only
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.
ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches
of a local database that includes entries from dbSTS, GDB, and
local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green,
unpublished.) for Human and Mouse sequences.
Genes and region of sequence similarity are identified by BLAST
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
EST and cDNA sequences. Genes demonstrate at least two exons
flanked by consensus splice sites that maintained sequence
continuity across the splice junctions. Sequences that are not
identical matches are annotated as similar.
SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
standard of double strand coverage with a minimum of 2 clones and 2
reads with no ambiguities or 2 chemistries with a minimum of 2
clones and 3 reads with no ambiguities. If the sequence quality for
a region does not meet this standard, it will be indicated in the
annotation as Low Coverage.
QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
standards - estimated error rate less than 1 per 10,000 bases.
Reports of lowest quality individual bases and measures of base
quality are listed below. Description of the metrics can be found
at URL:
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

Center clone name: 037007

```

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

```

----- Summary Statistics
Sequencing vector: plasmid, n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 223254 bases at least Q40
Consensus quality: 223828 bases at least Q30
Consensus quality: 223915 bases at least Q20
Insert size: 233000; agarose-fp
Insert size: 223953; sum-of-contigs
Quality coverage: 11.53x in Q20 bases; agarose-fp
Quality coverage: 12.00x in Q20 bases; sum-of-contigs
-----

```

* NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

```

* 1 8440: contig of 8440 bp in length
* 8441 21103: contig of 12563 bp in length
* 8541 21203: gap of unknown length
* 21104 36328: contig of 15125 bp in length
* 21204 36429: gap of unknown length
* 36329 45563: contig of 9135 bp in length
* 36429 45564 45663: gap of unknown length

```

              -----

NOTE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male
donor, as described by Osogawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
Tateno,M., Catanesi,J.J. and de Jong,P.J. (1998) An improved
approach for construction of bacterial artificial chromosome
libraries. Genomics 51:1-8. The clone may be obtained either from
Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
and coworkers at http://www.chori.org
VECTOR: pBACE3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-401119; the clone sequenced
to the right is RP11-48814. Actual start of this clone is at base
position 1 of RP11-732B24; actual end is at base position 179591 of
RP11-732B24.

```

Data from AC025554 was used to finish this clone, AC093902.
Polymorphisms have been identified between AC025554 and AC093902.

The sequence of AC026505 has been incorporated into AC093902.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em:, EMBL; Sw:,
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-32L6 is
from the RPCI-23 Mouse PAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm

AK111295
LOCUS      AK111295      859 bp      mRNA      linear      PLN 24-JUL-2003
DEFINITION Oryza sativa (japonica cultivar-group) cDNA clone:002-181-A09, full
            insert sequence.
ACCESSION  AK111295
VERSION    AK111295.1 GI:32996504
KEYWORDS   FLI CDNA; oligo capping.
SOURCE     Oryza sativa (japonica cultivar-group)
ORGANISM   Oryza sativa (japonica cultivar-group)
            Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
            Spermatophyta; Magnoliophyta; Liliopsida; Poales; Poaceae; BEP
            clade; Ehrhartoideae; Oryzeae; Oryza.

Direct Submission
Submitted (30-OCT-2003) Indian Initiative for Rice Genome
Sequencing, Department of Plant Molecular Biology, Benito Juarez
Road, New Delhi, Delhi 110021, India
On Oct 30, 2003 this sequence version replaced gi:23463031.
A gap of 40 bp was filled by merging the data of contig
CL038074.171 from Syngenta draft sequence (Syd) of the rice genome.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The nucleotide
sequence of this BAC clone was sequenced to phase II by the Indian
Initiative for Rice Genome Sequencing and completed to phase III at
the Cold Spring Harbor Laboratory Genome Center under the Indo-USA
collaboration.

LOCUS
DEFINITION
Human DNA sequence from clone RP11-54H19 on chromosome 1 contains
the 3' end of the LMNA gene for lamin A/C, the gene for a novel
protein similar to semaphorins (FLJ12287), a novel gene (KIAA0446),
the PMF1 gene for polyamine-modulated factor 1, the BGLAP gene for
bone gamma-carboxyglutamate (gla) protein (osteocalcin), the gene
for prostestin and adipon receptor family member VI (PAQR6) and the
3' end of the gene for Estlp-like protein B (EST1B), complete
sequence.

and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jun 26, 2005 this sequence version replaced gi:58038084.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: FADY
Center clone name: CH240-3J9
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 187776 bases at least Q40
Consensus quality: 189933 bases at least Q30
Consensus quality: 191909 bases at least Q20
Estimated insert size: 190708; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 26 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

JOURNAL

Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT

On Jun 29, 2005 this sequence version replaced gi:62420177. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information

Center project name: FELLY

Center clone name: CH240-70K12

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 97200 bases at least Q40

Consensus quality: 97183 bases at least Q30

Consensus quality: 97578 bases at least Q20

Estimated insert size: 99554; sum-of-contigs estimation

Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 4537: contig of 4537 bp in length
* 4538 4587: gap of 50 bp
* 4588 37386: contig of 32799 bp in length
* 37387 37436: gap of 50 bp
* 37437 84977: contig of 47541 bp in length
* 84978 85027: gap of 50 bp
* 85028 96411: contig of 11384 bp in length
* 96412 96680: gap of 269 bp
* 96681 98142: contig of 1462 bp in length.

JOURNAL

Submitted (31-JUL-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Jul 31, 2001 this sequence version replaced gi:15029434.
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email gc-help@bcm.tmc.edu

COMMENT

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

COMMENT

Submitted (09-FEB-2006) Human Genome Sequencing Center, Department
 of Molecular and Human Genetics, Baylor College of Medicine, One
 Baylor Plaza, Houston, TX 77030, USA

On Feb 9, 2006 this sequence version replaced gi:82654423.

The sequence in this assembly is a combination of BAC based reads

and whole genome shotgun sequencing reads assembled using Atlas

(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described

in the feature table below represents a scaffold in the Atlas

assembly (a 'contig-scaffold'). Within each contig-scaffold,

individual sequence contigs are ordered and oriented, and separated

by sized gaps filled with Ns to the estimated size. The sequence

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
and Minako Tateni in the laboratory of Pieter de Jong
(http://www.chori.org) from female C57BL/6J mouse kidney and/or
brain genomic DNA. The clone and detailed information can be
obtained from Research Genetics, Inc. (http://www.resgen.com) or
Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

COMMENT

of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Sep 19, 2002 this sequence version replaced gi:21737852. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information
Center project name: GPVU
Center clone name: CH230-9506
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 194634 bases at least Q40
Consensus quality: 199097 bases at least Q30
Consensus quality: 202096 bases at least Q20
Estimated insert size: 216622; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 90577: contig of 90577 bp in length
* 90578 90677: gap of unknown length
* 90678 244089: contig of 153412 bp in length
* 244090 244189: gap of unknown length
* 244190 246535: contig of 2346 bp in length.

-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
RP23-321C9 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.

NOTICE
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.
MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu
SOURCE INFORMATION:
The RPCI-24 BAC Library has been constructed by Pieter de Jong and
coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
and/or brain genomic DNA. The clone and detailed information can be
obtained from Pieter de Jong and coworkers at http://www.chori.org
NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

On Nov 15, 2002 this sequence version replaced gi:23908481.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
* NOTE: Estimated insert size may differ from sequence length
  (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
  consists of 1 contigs. Gaps between the contigs
  are represented as runs of N. The order of the pieces
  is believed to be correct as given, however the sizes
  of the gaps between them are based on estimates that have
  provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 194709: contig of 194709 bp in length.

by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
3 (bases 1 to 212324)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced gi:24942666.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

COMMENT

Direct Submission
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:23096320. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information

Center project name: GFWD

Center clone name: CH230-103A13

----- Summary Statistics

Assembly program: Atlas 3.0:

Consensus quality: 192971 bases at least Q40

Consensus quality: 199252 bases at least Q30

Consensus quality: 203322 bases at least Q20

Estimated insert size: 207485; sum-of-contigs estimation

Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 236414: contig of 236414 bp in length
* 236415 236514: gap of unknown length
* 236515 238064: contig of 1350 bp in length
* 238065 238164: gap of unknown length
* 238165 239372: contig of 1208 bp in length
* 239373 239472: gap of unknown length
* 239473 241557: contig of 2085 bp in length.

Protocol:
 23,021,928 chimpanzee whole genome shotgun reads were aligned to
 the Human genome NCBI
 Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,
 including Clint (Pan
 troglodytes verus), 3 other Pan troglodytes verus chimps
 (Donald, Karlén, Yvonne), 3 Pan
 troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps
 of unknown origin
 (Gon, Unknown Chimp). Common names: Pan troglodytes verus is the
 western chimp and Pan
 troglodytes troglodytes is the central chimp. To be included in
 chimpanzee SNP discovery, a
 read must be at least 500bp in length, at least 50% of its base
 calls must have Phred
 score >= 20, at least 30% of its base calls must satisfy
 SNQS(30,25) (single strand NQS, the
 base in question has Phred score >= 30, the surrounding 10 bases in
 the read have Phred
 score >= 25), and the read must have at least 200 bp SNQS(30,25)
 bases. Reads not uniquely
 placed in the genome and read pairs whose two ends were not

```

COMMENT
* NOTE: This is a 'working draft' sequence. It currently
* consists of 30 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1
* 1354: contig of 1354 bp in length

COMMENT

NOTE: This is a 'working draft' sequence. It currently consists of 44 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

 ----- Summary Statistics

 Center project name: M_BA0111E04

NOTICE: This sequence may not represent the entire insert of this
 clone. It may be shorter because we only sequence overlapping
 clone sections once, or longer because we provide a small overlap
 between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate
 chemistry, or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by sequence
 from more than one subclone; and the assembly was confirmed by
 restriction digest.

MAPPING INFORMATION:
 Mapping information for this clone was provided by Dr. Wes Warren,
 Department of Genetics, Washington University, St. Louis MO. For
 additional information about the map position of this sequence, see
<http://genome.wustl.edu>

SOURCE INFORMATION:
 The RPCI-23 BAC Library has been constructed by Kazutoyo Oseigawa
 and Minako Tateno in the laboratory of Pieter de Jong
 (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or
 brain genomic DNA. The clone and detailed information can be
 obtained from Research Genetics, Inc. (<http://www.resgen.com>) or
 Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:
 This sequence is the entire insert of the clone.

Rat Genome Sequencing Consortium.

Direct Submission

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:23664503.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 XX
 XX New nucleic acid molecule encoding a human G-protein coupled receptor.
 PT RAI3, useful for preventing, treating or ameliorating chronic obstructive

PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
 of COPD.

XX Disclosure; SEQ ID NO 33; 301pp; English.

XX The present sequence is that of DNA encoding a peptide corresponding to
 CC amino acids 340-353 of a human G-protein coupled receptor, denoted
 CC retinoic acid induced 3 (RAI-3) protein ADI28460. The peptide was
 CC identified in studies of RAI-3 phosphorylation in response to cigarette
 CC smoke. Primers based on this sequence can be used in a PCR to identify
 CC individuals at risk for developing chronic obstructive pulmonary disease
 CC (COPD). RAI-3 is tyrosine phosphorylated and/or is associated/complexed
 CC with tyrosine phosphorylated proteins only in cells that have been
 CC exposed to cigarette smoke. Since RAI-3 is primarily expressed in lung
 CC tissue, and since cigarette smoke is a major causative factor of COPD,
 CC RAI-3 provides a novel cellular target for identifying modulators, e.g.
 CC agonists or antagonists, useful for the treatment and/or prevention of
 CC COPD and related disorders such as emphysema and chronic bronchitis. RAI-
 CC 3 modulators, e.g. agonists and antagonists, especially antisense
 CC compounds, can be used to treat COPD and other disorders an diseases
 CC associated with regulation of NF-kB and/or its associated or interacting
 CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
 CC the RAI-3 gene are useful for determining COPD association in
 CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
 CC preventing, treating or ameliorating disorders related to aberrant GPCR
 CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
 CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
 CC disorders or conditions, autoimmune disorders, disorders related to
 CC hyperimmune activity, inflammatory conditions, disorders related to
 CC aberrant acute phase responses, hypercongenital conditions, birth
 CC defects, necrotic lesions, wounds, organ transplant rejection, renal
 CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
 CC related to aberrant signal transduction, proliferation disorders,
 CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
 CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
 CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
 CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
 CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
 CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
 CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
 CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
 CC regulation (all claimed).

XX
XX New isolated nucleic acids and polypeptides capable of eliciting a
XX humoral and/or cellular immune response, useful for diagnosing,
XX preventing or treating cancer, particularly colon cancer.
XX
XX Claim 1; SEQ ID NO 1811; 87dp; English.
XX
XX The invention relates to polynucleotide and polypeptide sequences
XX associated with cancer, particularly colon cancer. Also disclosed are (i)
XX an expression vector comprising the polynucleotide, (ii) a host cell
XX transformed or transfected with the expression vector, (iii) an isolated
XX antibody, or its antigen-binding fragment, which specifically binds to
XX the polypeptide, (iv) a method of detecting or determining the presence
XX of cancer in a patient, (v) a fusion protein comprising at least one of
XX the polypeptides, (vi) an oligonucleotide that hybridizes to the
XX polynucleotide sequence under highly stringent conditions, and (vii) a
XX method of stimulating and/or expanding T cells specific for a tumour
XX protein. The polypeptide specifically comprises the amino acid sequence
XX of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
XX frames (ORFs) of C636S. These polypeptides are encoded by the
XX polynucleotide sequences, where both are capable of eliciting a humoral
XX and/or cellular immune response. The polynucleotides, polypeptides, and
XX antibodies are useful for diagnosing, preventing or treating cancer,
XX particularly colon cancer. The polynucleotide and polypeptide sequences
XX are also useful in DNA strand invasion, antisense inhibition, mutational
XX analysis, nucleic acid purification, isolation of transcriptionally
XX active genes, blocking or transcription factor binding, genome cleavage
XX or in situ hybridization, and as enhancers of transcription or
XX biomarkers. This sequence represents a human colon cancer associated
XX cDNA. Note: The sequence data for this patent was obtained in electronic
XX format directly from the USPTO web site at seqdata.uspto.gov

XX Novel human proteins having hydrophobic domains used for research and
PT diagnostic purposes.
XX
XX Claim 3; Page 88; 117pp; English.
XX This sequence represents the hydrophobic domain containing protein, clone
CC HP10549 coding region. The sequence is isolated from a human stomach
CC cancer cell line. The invention relates to human proteins with
CC hydrophobic domains, the DNA and the cDNA encoding them. The
CC polynucleotides and proteins are predicted to have biological activities
CC which make them suitable for treating, preventing or ameliorating medical
CC conditions in humans and animals. Suggested activities include
CC nutritional activity (nutritional source or supplement); cytokine and
CC cell proliferation/differentiation activity; immune stimulating (e.g. as
CC vaccines) or suppressing activity (e.g. to treat various immune
CC deficiencies such as AIDS or HIV, connective tissue disease, systemic
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
CC organ transplantation); haematopoiesis regulating activity (e.g. in
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
CC activity (e.g. wound healing and tissue repair, ulcers, burns,
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
CC activity; haemostatic and thrombolytic activity (e.g. treating
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
CC tumour inhibition activity. The polynucleotides are also stated to be
CC useful for gene therapy. Other activities include inhibiting infections
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;
CC treatment of depression; treatment of pain; hormonal or endocrine
CC activity. The polynucleotides may also be used for recombinant expression
CC of the protein

Novel isolated polypeptide encoded by breast cancer marker gene, useful for diagnosing, staging, monitoring, prognosing and treating diseases associated with breast cancer.

Disclosure; Page 187-188; 725pp; English.

The invention relates to an isolated polypeptide encoded by a breast cancer marker gene comprising any of 1417 21-805 nucleotide sequences, given in the specification. The methods of the invention are useful for diagnosing patients having an identified breast mass or symptoms associated with breast cancer, to diagnose breast cancer or its precursors, and for monitoring the efficacy of treatment of a breast cancer patient (e.g. efficacy of chemotherapy). The methods are also

useful for evaluating a patient before, after or during therapy, to evaluate the reduction in a tumour burden. The breast cancer marker gene proteins are useful as immunogens for raising antibodies, by immunising a mammal with a breast cancer marker protein. The marker proteins are useful as bait proteins in a two-hybrid or three-hybrid assay, to identify other proteins which bind to or interact with the marker proteins. The breast cancer marker genes are useful as surrogate marker genes for one or more disorders, disease states or conditions leading to disease states, in particular, breast cancers. The breast cancer marker genes are useful as pharmacodynamic marker genes. An antibody which selectively binds to a protein of a breast cancer marker gene is useful for treating cancers, particularly breast cancers. The host cell of the invention is useful for producing non-human transgenic animals. This polynucleotide sequence represents one of the breast cancer marker genes of the invention

PT compounds that modulates diagnosing and treating disease condition
PT associated with GPCR dysfunction e.g. autoimmune diseases, angina
PT pectoris, Parkinson's disease.
XX
PS Claim 151; SEQ ID NO 1137; 542pp; English.
XX
CC The invention relates to human and mouse G protein-coupled receptors
CC (GPCRs) and nucleic acids encoding them. The invention also relates to
CC sequences at least 90% identical to the GPCR proteins and nucleic acids
CC of the invention; methods of treating, preventing or diagnosing diseases
CC associated with GPCRs of the invention; methods of screening for
CC compounds useful in the treatment of GPCR-related diseases; a transgenic
CC mouse comprising a GPCR gene of the invention; a mouse comprising a
CC mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
CC from the transgenic mice; kits comprising several mice each of which has
CC a mutation in a different GPCR gene of the invention; and kits comprising
CC probes which hybridise to GPCR polynucleotides of the invention. The
CC invention further discloses variants of the GPCR polypeptides and vectors
CC comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
CC be used in the diagnosis, treatment or prevention of a wide variety of
CC diseases including neurological disorders (e.g., Alzheimer's disease,
CC depression, diabetic neuropathy, Parkinson's disease or schizophrenia);
CC disorders of the adrenal gland; disorders of the colon or intestine
CC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel
CC syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or
CC myocardial infarction); muscular disorders; blood disorders (e.g.,
CC anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or
CC AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid
CC arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g.,
CC obesity, enzyme deficiency-related diseases or vitamin deficiency-related
CC diseases); and disorders of the kidney, liver, lung, breast, ovary,
CC uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and
CC thyroid (e.g., cancers). The present sequence represents a GPCR-encoding
CC nucleic acid of the invention. Note: The full sequence data for this
CC patent did not form part of the printed specification; those sequences
CC not shown were obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PS
XX The invention relates to novel nucleic acid sequences derived from rat
CC dermal papilla, human keratinocytes and neonatal foreskin fibroblasts,
CC and mouse embryonic skin, keratinocyte stem cells and transit amplifying
CC cells. Polypeptides of the invention may be used to treat inflammation,
CC cancer and neurological diseases. The proteins may be used to stimulate
CC the growth and motility of keratinocytes, to inhibit the growth of cancer
CC cells, to modulate angiogenesis and tumour vascularisation, to modulate
CC skin inflammation, to modulate epithelial cell growth and to inhibit
CC binding of HIV-1 to leukocytes. The invention may also be used to treat
CC growth and developmental defects, skin wounds and hair follicle
CC disorders. Sequences AA261606-261832 represent cDNA sequences derived
CC from several mouse, rat or human skin cell types. Sequences AA261606-
CC 261649, AA261725-261765, AA261802-261811 and AA261826 encode proteins
CC with an N-terminal signal sequence, indicating that the proteins are
CC secreted. Sequences AA261650-261668, AA261766-261780, AA261812-261817 and
CC AA261827-261829 encode proteins with one or more putative transmembrane
CC domains

PT or treating cancer.
XX
PS Claim 1; SEQ ID NO 64; 96pp; English.
XX
CC This invention relates to a novel isolated antibody, for example anti-E16
CC or anti-TAT112 antibody, that binds to a tumor-associated antigenic
CC target polypeptide (TAT) and that lacks an associated signal peptide
CC sequence. The invention may be useful for the development of compounds
CC with a cytostatic activity acting as antagonists of the TAT188
CC polypeptide or RNA interference whilst the disclosed sequences may be
CC useful for gene therapy. The invention is useful for inducing the death
CC of a cell (such as a cancer cell chosen from breast, colon, rectum,
CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,
CC inhibiting proliferation or promoting cell death of a cell expressing
CC TAT188. In addition, the invention may be useful for detecting the level
CC of TAT188 polypeptide in a test cell relative to a control cell, or
CC treating or preventing a cell proliferative disorder associated with
CC increased expression of TAT188. The novel antibody of the invention is
CC useful for inhibiting the growth of a cancer cell and may be useful for
CC diagnosing or treating cancer. The present sequence is that of the human
CC TAT143 cDNA which encodes a protein against which an antibody of the
CC invention may be targeted.

PT Novel human proteins having hydrophobic domains used for research and
PT diagnostic purposes.

```

XX PS Claim 4; Page 111-113; 117pp; English.

XX CC This sequence represents the hydrophobic domain containing protein, clone

XX CC HP10549 nucleotide sequence. The sequence is isolated from a human

XX CC stomach cancer cell line. The invention relates to human proteins with

XX CC hydrophobic domains, the DNA and the cDNA encoding them. The

XX CC polynucleotides and proteins are predicted to have biological activities

XX CC which make them suitable for treating, preventing or ameliorating medical

XX CC conditions in humans and animals. Suggested activities include

XX CC nutritional activity (nutritional source or supplement); cytokine and

XX CC cell proliferation/differentiation activity; immune stimulating (e.g. as

XX CC vaccines) or suppressing activity (e.g. to treat various immune

XX CC deficiencies such as AIDS or HIV, connective tissue disease, systemic

XX CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary

XX CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin

XX CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease

XX CC and autoimmune inflammatory eye disease, as well as asthma, allergies and

XX CC organ transplantation); haematopoiesis regulating activity (e.g. in

XX CC treatment of myeloid or lymphoid cell deficiencies); tissue growth

XX CC activity (e.g. wound healing and tissue repair, ulcers, burns,

XX CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic

XX CC activity; haemostatic and thrombolytic activity (e.g. treating

XX CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and

XX CC tumour inhibition activity. The polynucleotides are also stated to be

XX CC useful for gene therapy. Other activities include inhibiting infections

XX CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,

XX CC malaria); affecting bodily characteristics such as, e.g. weight, colour,

XX CC skin, affecting biorhythms or circadian cycles; enhancing fertility;

XX CC treatment of depression; treatment of pain; hormonal or endocrine

XX CC activity. The polynucleotides may also be used for recombinant expression

XX CC of the protein

XX PT Transformation of cells with a fusion protein of an orphan receptor

XX PT protein with a fluorescent protein useful for identification of ligands

XX PT to the orphan receptor.

XX PS Example 4; SEQ ID NO 196; 594pp; Japanese.

XX CC This invention relates to a novel method of identifying ligands to an

XX CC orphan receptor protein which comprises transforming cells with DNA

XX CC encoding a fusion protein of the orphan receptor with a fluorescent

XX CC protein, so that the fusion protein is expressed in the cells (or cell

XX CC membranes isolated from them) and contacting the cells with the potential

XX CC ligand to be tested. A suitable fluorescent protein for incorporation in

XX CC the fusion protein is green fluorescent protein (GFP), for example GFP-1,

XX CC wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the

XX CC identification of ligands binding to an orphan receptor protein.

XX PT Diagnosing breast cancer in a patient comprises detecting the level of

XX PT gene expression in cell or tissue samples, where a differential gene

XX PT expression is indicative of breast cancer.

XX PS Claim 1; SEQ ID NO 307; 260pp + Sequence Listing; English.

XX CC The present invention relates to methods of diagnosing breast cancer in a

XX CC patient, which comprise detecting the level of expression in a tissue

XX CC sample of two or more genes selected from those shown in AB09867-

XX CC ABT11112, where a differential expression of the genes indicates breast

XX CC cancer. The methods are useful in diagnosing, treating, detecting the

CC progression, and in monitoring treatment of breast cancer in patients.
CC The methods are also useful as a screening tool for agents that modulate
CC the onset or progression of breast cancer. The breast cancer genes may be
CC used as diagnostic markers for the prediction or identification of the
CC malignant state of breast tissue, for confirming the type and progression
CC of cancer, and for drug screening and assays. The present sequence is a
CC coding sequence of the invention. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub.published_pct_sequences

XX Screening, diagnosing and/or treating carcinoma, including breast,
XX pancreatic, lung, liver, ovarian and colon cancer by detecting the change
XX in expression or activity of an RAIG1 polypeptide or encoding nucleic
XX acid molecule.

XX Claim 1; Fig 2; 43pp; English.

XX This sequence encodes retinoic acid-inducible gene 1 (RAIG1) polypeptide.
XX RAIG1 is an orphan G-protein coupled receptor (GPCR) located on
XX chromosome 12. RAIG1 shows a restricted expression pattern compared to a
XX related receptor, GPCR5B, which is widely expressed in peripheral and
XX central tissues. The RAIG1 cDNA and polypeptide sequence may be used in
XX the method of the invention for screening for and/or diagnosis of
XX carcinoma in a subject, and/or monitoring the effectiveness of carcinoma
XX therapy. The method comprises detecting and/or quantifying in a
XX biological sample obtained from the subject an RAIG1 polypeptide and a
XX nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule
XX are useful in the manufacture of a medicament for the treatment of
XX carcinoma, where the composition is a vaccine. An agent which interacts
XX with or causes change in the expression or activity of an RAIG1

CC polypeptide or nucleic acid molecule, is also useful in the manufacture
CC of a medicament for the treatment of carcinoma that is breast cancer,
CC pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon
CC cancer and/or osteosarcoma. They can also be used in the diagnosis and
CC screening of such carcinomas.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
XX Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesizing 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or autoimmune diseases.

Disclosure; Fig 1; 523pp; English.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell regeneration-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention

XX New genes that are up-regulated or down-regulated in cancers, useful as
PT markers for diagnosing e.g. cancer, ischaemia or heart diseases, or as
PT therapeutic targets for screening drugs for treating these diseases.
XX
XX Claim 8; Page 643-644; 767pp; English.
XX
XX The present invention describes an isolated nucleic acid molecule, which
CC comprises the sequence of any of the genes that are up-regulated or down-
CC regulated in specific cancers (e.g. about 1031 genes up-regulated in
CC acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer
CC related gene nucleotide sequences which encode the proteins given in
CC ABR58521 to ABR58709. Also described: (1) determining the presence or
CC absence of a pathological cell in a patient; (2) an expression vector
CC comprising a nucleic acid molecule described above; (3) a host cell
CC comprising the vector; (4) an isolated polypeptide, which is encoded by
CC the nucleic acid; (5) an antibody that specifically binds the polypeptide
CC of (4); (6) specifically targeting a compound to a pathological cell in a
CC patient by administering to the patient the antibody above; and (7) a
CC drug screening assay. The nucleic acid is useful as diagnostic markers or
CC therapeutic targets. In particular, the nucleic acid is useful for
CC diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow,
CC bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary,
CC pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases,
CC atherosclerosis and endometriosis. The nucleic acid is also useful in
CC drug screening, particularly for identifying agents for treating these
CC pathologies

XX
XX Novel isolated antibody capable of binding to tumor-associated antigenic
XX target polypeptide, useful for treating cell proliferative disorder e.g.
XX cancer.
XX
XX Claim 1; SEQ ID NO 40; 337pp; English.
XX
XX The invention relates to a novel isolated antibody binding to a
XX polypeptide having at least 80% sequence identity to a polypeptide having
XX any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
XX target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
XX specification, a polypeptide having any one of (AEA00127-AEA00202),
XX lacking its associated signal peptide, or an extracellular domain of a
XX polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
XX encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
XX An antibody of the invention has cytostatic activity. The antibody is
XX useful for inhibiting growth of a cell expressing TAT188, which involves
XX contacting the cell with the antibody. The cell is a cancer cell chosen
XX from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
XX liver cell. The cancer cell is a mammalian cell, preferably a human cell.
XX The antibody is also useful for detecting the level of TAT188
XX polypeptide expressed in a test cell relative to a control cell, and for
XX detecting the level of TAT188 polypeptide or a polypeptide having at
XX least 80 % sequence identity to the TAT188 polypeptide sequence in a test
XX cell relative to a control cell. The antibody is useful for treating a
XX preventing a cell proliferative disorder associated with increased
XX expression or activity of a polypeptide having at least 80 % identity to
XX a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
XX The method of the invention is useful for inhibiting the growth of a
XX cancer cell. The present sequence encodes a polypeptide of the invention.

XX
XX Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
XX to tumor-associated antigenic target polypeptide, useful for diagnosing
XX or treating cancer.
XX
XX Claim 1; SEQ ID NO 40; 96pp; English.
XX
XX This invention relates to a novel isolated antibody, for example anti-E16
XX or anti-TAT112 antibody, that binds to a tumor-associated antigenic
XX target polypeptide (TAT) and that lacks an associated signal peptide
XX sequence. The invention may be useful for the development of compounds
XX with a cytostatic activity acting as antagonists of the TAT188
XX polypeptide or RNA interference whilst the disclosed sequences may be
XX useful for gene therapy. The invention is useful for inducing the death
XX of a cell (such as a cancer cell chosen from breast, colon, rectum,
XX endometrium, kidney, lung, ovary, skin and liver) to which it binds,
XX inhibiting proliferation or promoting cell death of a cell expressing
XX TAT188. In addition, the invention may be useful for detecting the level
XX of TAT188 polypeptide in a test cell relative to a control cell, or
XX treating or preventing a cell proliferative disorder associated with
XX increased expression of TAT188. The novel antibody of the invention is
XX useful for inhibiting the growth of a cancer cell and may be useful for
XX diagnosing or treating cancer. The present sequence is that of the human
XX TAT115 cDNA which encodes a protein against which an antibody of the
XX invention may be targeted.

XX New nucleic acid differentially expressed in pancreatic tumor tissue, for
XX use as diagnostic agents and in screening for therapeutic agents.
XX Claim 1; SEQ ID NO 42; 28pp; German.
XX The invention relates to a novel human nucleic acid sequence of the
XX pancreas and its encoded protein. The invention further comprises:
XX proteins and peptides, preferably isolated, that contain a sequence
XX encoded by the novel nucleic acid; and methods for diagnosis and
XX treatment of pancreatic cancer, using a substance that inhibits or binds
XX to the protein or its DNA, including: an antisense oligonucleotide, short
XX interfering RNA or ribozyme directed against the pancreatic protein, an
XX organic molecule, particularly having a molecular weight below 5000,
XX especially 300, that binds to the pancreatic DNA, an aptamer or
XX (monoclonal) antibody, preferably human or humanized, that binds to the
XX pancreatic DNA, or an anti-idiotypic antibody raised against the
XX monoclonal antibody, any of which may be derivatized with a reporter
XX group, cytotoxic compound, immunostimulant and/or radioisotope. The novel
XX human pancreatic proteins and their encoding DNA have cytostatic
XX activity. The novel sequences are useful for inhibiting transcription
XX and/or expression of genes and proteins associated with pancreatic
XX cancer. This polynucleotide sequence represents the DNA encoding one of
XX the novel human pancreatic proteins of the invention. Note: This sequence
XX is not shown in the specification, it has been electronically downloaded
XX from a DVD-rom provided with this specification by the European Patent
XX Office.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
XX length cDNAs defined in the specification, and for the detection and/or
XX diagnosis of the abnormality of the proteins encoded by the full-length
XX cDNAs.
XX Claim 1; SEQ ID NO 5189; 2537pp + Sequence Listing; English.
XX The present invention describes primer sets for synthesizing 5602 full-
XX length cDNAs defined in the specification. Where a primer set comprises:
XX (a) an oligo-dT primer and an oligonucleotide complementary to the
XX complementary strand of a polynucleotide which comprises one of the 5602
XX nucleotide sequences defined in the specification, where the
XX oligonucleotide comprises at least 15 nucleotides; or (b) a combination
XX of an oligonucleotide comprising a sequence complementary to the
XX complementary strand of a polynucleotide which comprises a 5'-end
XX sequence and an oligonucleotide comprising a sequence complementary to a
XX polynucleotide which comprises a 3'-end sequence, where the
XX oligonucleotide comprises at least 15 nucleotides and the combination of
XX the 5'-end sequence/3'-end sequence is selected from those defined in the
XX specification. The primer sets can be used in antisense therapy and in
XX gene therapy. The primers are useful for synthesizing polynucleotides,
XX particularly full-length cDNAs. The primers are also useful for the
XX detection and/or diagnosis of the abnormality of the proteins encoded by
XX the full-length cDNAs. The primers allow obtaining of the full-length
XX cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

XX PT Determining susceptibility of an individual to joint space narrowing,
XX PT osteophyte development and/or joint pain comprises identifying whether
XX PT the individual has at least one polymorphism in a polynucleotide encoding
XX PT a protein.
XX PS Disclosure; SEQ ID NO 33; 297bp; English.
XX CC
XX CC The invention relates to a method of determining susceptibility of an
XX CC individual to joint space narrowing and/or osteophyte development and/or
XX CC joint pain comprising identifying whether the individual has at least one
XX CC polymorphism in a polynucleotide encoding at least one of the protein
XX CC listed in the specification. The methods, composition and agent are
XX CC useful for modulating the susceptibility of an individual to joint space
XX CC narrowing and/or osteophyte development and/or joint pain that is
XX CC associated with a disease, preferably osteoarthritis. The cell line and
XX CC the non-human animal are useful for screening for an agent for diagnosing
XX CC an individual having susceptibility to joint space narrowing and/or
XX CC osteophyte development and/or joint pain. This sequence corresponds to
XX CC the polynucleotide encoding a protein listed in the specification. (Note:
XX CC The sequence data for this patent did not form part of the printed
XX CC specification but was obtained in electronic format directly from WIPO at
XX CC ftp.wipo.int/pub/published_pct_sequences).

XX PS Claim 3; SEQ ID NO 255; 164pp; English.
XX CC
XX CC The present invention relates to Aspergillus fumigatus genes that are
XX CC essential and are potential targets for drug screening. The methods and
XX CC compositions of the present invention are useful for diagnosing and/or
XX CC treating invasive Aspergillus fumigatus infection, including the allergic
XX CC forms of the disease, such as Farmer's lung disease. They can also be
XX CC used in various drug discovery purposes, such as expression of the
XX CC recombinant protein, hybridization assay and construction of nucleic acid
XX CC arrays. The present sequence represents an Aspergillus fumigatus
XX CC essential gene full length genomic sequence, used during diagnosis and
XX CC drug development in the invention. These genes share a high degree of
XX CC sequence conservation with known essential genes of candida albicans. The
XX CC sequence data for this patent is not represented in the printed
XX CC specification, but was obtained in electronic format from WIPO.

XX
XX New isolated nucleic acid molecule, useful for drug screening and
XX toxicity assays or for assessing the impact, including toxicity, of a
XX compound, pharmaceutical agent or environmental pollutant on a cell or
XX living organism.
XX
XX Claim 1; SEQ ID NO 7831; 41pp; English.
XX
XX This invention is related to a novel isolated canine nucleic acid
XX sequences and the construction of canine microarrays containing a
XX significant portion of the canine genome. The isolated canine nucleic
XX acid sequences of the invention may be useful for drug screening and
XX toxicity assays. The invention is therefore useful for assessing the
XX impact, including toxicity, of a compound, pharmaceutical agent or
XX environmental pollutant on a cell or living organism. The methods are
XX useful for detecting genes that are up- or down-regulated in canines in a
XX disease state. The sequences are useful as diagnostic agents or markers
XX to detect a cellular response in a sample individually or as part of a
XX gene expression profile. It is also useful as a target for agents that
XX modulate gene expression or activity. The database is useful for
XX producing electronic Northern blots that allow the user to determine the cell
XX type or tissue in which a given gene is expressed and to allow
XX determination of the abundance or expression level of a given gene in a
XX particular tissue or cell. The methods are useful for determining the
XX similarity of a toxic response to one or more individual compounds. The
XX methods are useful for predicting at least one toxic response or the
XX likelihood that a compound or test agent will induce various specific
XX pathologies such as those of the liver (liver necrosis, fatty liver
XX disease, protein aduet or formation or hepatitis), those of the kidney,
XX heart, brain or testes, or other pathologies associated with at least one
XX of the toxins. The methods are also useful for predicting or elucidating
XX the potential cellular pathways influenced, induced or modulated by the
XX compound or test agent due to the similarity of the expression profile
XX compared to the profile induced by a known toxin. The present sequence is
XX that of a canine DNA sequence which was claimed for use during the
XX production of a canine microarray of the invention.

XX
XX Novel polynucleotide comprising Bifidobacterium genome sequence useful as
XX a probe or primer for detecting and/or identifying Bifidobacterium longum
XX in a biological sample.
XX
XX Disclosure; SEQ ID NO 1101; 80pp; English.
XX
XX The present invention describes a polynucleotide (I) comprising a
XX sequence of a Bifidobacterium genome selected from the nucleotide
XX sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at
XX least 90% identity or which hybridises with the sequences given in
XX ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a
XX fusion protein, comprising a sequence selected from 1097 sequences given
XX in ABP65258 to ABP66354 ligated in frame to a polynucleotide encoding a
XX heterologous polypeptide. (I) has anti-diarrheic and antibacterial
XX activities, and can be used as an inhibitor of Salmonella. (I) (which is
XX a probe) is useful for the detection and/or identification of
XX Bifidobacterium longum in a biological sample. A carrier containing the
XX lactic acid bacterium Bifidobacterium longum NCC2705 (NCM I-2618) can be
XX used for preventing and/or treating diarrhoea brought about by pathogenic
XX bacteria and/or rotavirus. The carrier is a food composition selected
XX from milk, yogurt, curd, cheese, fermented milks, milk based fermented
XX products, ice-creams, fermented cereal based products, milk based
XX powders, infant formula, pet food or a pharmaceutical composition
XX selected from tablets, liquid bacterial suspensions, dried oral
XX supplement, wet oral supplement, dry tube feeding or wet tube feeding.
XX (I) is useful in DNA arrays or chips to carry out analysis of the
XX expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent
XX Bifidobacterium related nucleotide sequences given in the Sequence
XX listing from the present invention but not mentioned further within the
XX specification. N.B. The sequence data for this patent is not represented
XX in the printed specification but is based on sequence information

PT when coupled to foreign antigen gene, for prodn. of multivalent live
PT vaccines, also new probes for detecting Mycoplasma and manipulating its
PT genome.
XX
XX Claim 2; Page 46-48; 81pp; English.
XX
XX A 10 kb DNA fragment was isolated from a Mycoplasma gallisepticum genomic
CC library using probes (AAT51533-34) based on tryptic peptides of a M.
CC gallisepticum PMGA adhesin. The fragment was divided into 5 putative
CC genes, PMGA1.2, PMGA1.3, PMGA1.4 and PMGA1.5/1.6 (AAT51535-38) on the
CC basis of deduced amino acids sequences. The 5 genes are closely related.
CC The regions between the genes (see also AAT51539-42) are highly
CC conserved. A consensus conserved sequence (AAT51532) can be used as a
CC probe to detect Mycoplasma infection, esp. in poultry. The promoter
CC sequences found in the conserved sequences may be linked to exogenous
CC antigen genes for prodn. of multivalent live vaccines. (Updated on 16-OCT

XX PT New isolated nucleic acid representing a synthetic BAX-gene, useful as
 PT medicament for treating, preventing and/or alleviating yeast or fungal
 PT infections or proliferative disorders, or for preventing apoptosis in
 PT certain diseases.

XX PS Claim 36; Fig 1; 344pp; English.

XX CC This invention describes a novel nucleic acid representing a synthetic
 CC Bax gene. The Bax gene of the invention is useful for identifying Bax-
 CC resistant yeast or fungi, identifying, or obtaining and identifying
 CC Candida spp. sequences that are differentially expressed in a pathway
 CC eventually leading to programmed cell death or identifying inhibitors or
 CC inhibitor sequences of Bax-induced cell death. The products of the
 CC invention have cytostatic, fungicide; immunosuppressive, virucide and
 CC vasotropic activity and can be used in vaccines or for gene therapy. The
 CC isolated nucleic acids, polypeptides, pharmaceutical compositions,

CC antisense molecules and antibodies are useful as medicaments or in
 CC preparing a medicament for treating, preventing and/or alleviating
 CC diseases associated with yeast or fungi or proliferative disorders, such
 CC as cancer, or for preventing apoptosis in certain diseases. The compounds
 CC or polypeptides, or the genetically modified organism are useful for
 CC preparing a medicament for modifying the endogenic flora of humans and
 CC other mammals. The vaccine is useful for immunising against yeast or
 CC fungal infections. Apoptosis-related diseases include autoimmune disease,
 CC ischaemia, diseases related with viral infections or neurodegenerations.
 CC This sequence represents a polynucleotide associated with the Bax gene
 CC described in the disclosure of the invention

XX PT Novel polynucleotides derived from Coryneform bacteria, for identifying
 PT mutation point of a gene, measuring expression of a gene, analyzing
 PT expression profile or pattern of a gene and identifying homologous gene.

XX PS Disclosure; SEQ ID NO 7060; 246pp + Sequence Listing; English.

XX CC The present invention provides a number of nucleotide and protein
 CC sequences from the Coryneform bacterium Corynebacterium glutamicum. These
 CC are useful for identifying the mutation point of a gene derived from a
 CC mutant of coryneform bacterium, measuring expression amount and analysing
 CC the expression profile or expression pattern of a gene derived from
 CC Coryneform bacterium, and identifying a homologue of a gene derived from
 CC coryneform bacterium. Coryneform bacteria are useful for producing amino
 CC acids, nucleic acids, vitamins, saccharides and organic acids.
 CC particularly L-lysine. The present sequence is a nucleic acid described
 CC in the exemplification of the invention. Note: The sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from the European Patent Office

XX The invention relates to an isolated or purified nucleotide sequences (I)
CC from Legionella pneumophila Paris strain (II), and their related
CC sequences or fragments, are useful as primers and probes for detection
CC and amplification, including differentiation between the Paris and
CC Philadelphia strains of Legionella pneumophila and to prepare recombinant
CC (hybrid) polypeptides (III). (II) are also useful for identification of
CC specific antibodies (Ab), also used for detection/identification of
CC Legionella, and some (I), specifically those involved in synthesis of
CC surface proteins, are targets for identification of inhibitors. (II), or
CC vectors that contain (I), are useful as vaccines and immunogenic
CC compositions, for treatment and prevention of infections by L.
CC pneumophila. The present sequence represents a L. pneumophila DNA.

PT New genome of Legionella pneumophila Paris strain and derived
PT polypeptides, useful for detection or identification of the strain and
PT for treatment and prevention of infections.
XX
PS Example 9; SEQ ID NO 3503; 660pp; English.
XX
XX The invention relates to an isolated or purified nucleotide sequences (I)
CC from Legionella pneumophila Paris strain. (II), and their related
CC sequences or fragments, are useful as primers and probes for detection
CC and amplification, including differentiation between the Paris and
CC Philadelphia strains of Legionella pneumophila and to prepare recombinant
CC (hybrid) polypeptides (III). (II) are also useful for preparation of
CC specific antibodies (Ab), also used for detection/identification of
CC Legionella, and some (I), specifically those involved in synthesis of
CC surface proteins, are targets for identification of inhibitors. (II), or

CC vectors that contain (I), are useful as vaccines and immunogenic
CC compositions, for treatment and prevention of infections by L.
CC pneumophila. The present sequence represents a L. pneumophila DNA.

XX
PT Novel Chlamydia pneumoniae protein useful in the manufacture of a
PT medicament for treatment or prevention of infection due to Chlamydia,
PT preferably Chlamydia pneumoniae, and for diagnostic purposes.
XX
PS Claim 5; Page 176; 364pp; English.
XX
CC Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia
CC pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding
CC them. The proteins are predicted to be immunogenic and may therefore be
CC useful in vaccine production and for diagnostic purposes. Chlamydia
CC pneumoniae is a common cause of respiratory disease in humans, and is
CC also involved in the development of cardiovascular diseases such as

CC atherosclerosis, coronary artery disease, carotid artery stenosis,
CC myocardial infarction, cerebrovascular disease, aortic aneurysm,
CC claudication and stroke. The proteins and nucleic acids of the invention
CC may be used in vaccines and pharmaceutical compositions for the
CC prevention or treatment of chlamydial infections, particularly Chlamydia
CC pneumoniae infections. The proteins may also be used in the detection of
CC Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched
CC DNA probe assay or blotting techniques for determining Chlamydia
CC pneumoniae gene expression. The present sequence represents a
CC specifically claimed DNA which encodes a Chlamydia pneumoniae protein of
CC the invention. (Updated on 29-AUG-2003 to standardise OS field)

XX
XX New cardiovascular system related polynucleotides and polypeptides,
XX useful for preventing, treating, or ameliorating a medical condition,
XX such as cancer of cardiovascular tissues and cancer metastases.
XX
XX Claim 1; SEQ ID NO 1560; 262pp; English.
XX
XX The invention relates to human cardiovascular system related polypeptides
XX and the polynucleotides encoding them. The polypeptides, polynucleotides
XX and antibodies to the polypeptides are useful for diagnosing a
XX pathological condition or a susceptibility to a pathological condition,
XX for preventing, treating, or ameliorating a medical condition, such as
XX cancer of cardiovascular system tissues, proliferative disorders, foetal
XX and developmental abnormalities, haematopoietic disorders, diseases of
XX the immune system, AIDS, autoimmune diseases (e.g., rheumatoid
XX arthritis), inflammation, allergies, neurological disorders (e.g.,
XX Alzheimer's disease, Parkinson's disease), cognitive disorders,
XX schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,
XX diabetes, atherosclerosis, cardiovascular disorders, angiogenic
XX disorders, kidney disorders, gastrointestinal disorders, pregnancy-
XX related disorders, endocrine disorders and infections. The nucleic acids
XX are also useful for chromosome identification, radiation hybrid mapping
XX or long-range restriction mapping. The polypeptides and polynucleotides
XX may also be used as food additives or preservatives to increase or
XX decrease storage capabilities, fat content or other nutritional
XX components. This sequence represents human cardiovascular system related
XX genomic DNA of the invention.

XX
XX WPI; 2004-081713/08.
XX
XX New cardiovascular system-related nucleic acid molecule, useful for
XX diagnosing, preventing or treating diseases of the cardiovascular system,
XX and in chromosome mapping, drug screening or in pharmacogenomics.
XX
XX Disclosure; SEQ ID NO 1560; 262pp; English.
XX
XX The invention relates to an isolated nucleic acid molecule encoding a
XX human cardiovascular system associated polypeptide (or antigens), or its
XX fragment. Also included recombinant vectors, recombinant host cells, an
XX isolated human cardiovascular system associated polypeptide (including
XX its fragment, allelic variant, species homologue or epitope), an isolated
XX antibody that binds specifically to a human cardiovascular system
XX associated polypeptide, diagnosing a pathological condition or
XX susceptibility to a pathological condition (comprising determining the
XX presence or absence of a mutation in human cardiovascular system
XX associated nucleic acid and diagnosing a condition based on the presence
XX or absence of the mutation), identifying a binding partner to human
XX cardiovascular system associated polypeptides, the gene corresponding to
XX the human cardiovascular system associated cDNA sequence and identifying
XX an activity in a biological assay comprising expressing the human
XX cardiovascular system associated cDNA in a cell, isolating the
XX supernatant, detecting an activity in a biological assay and identifying
XX the protein in the supernatant having the activity. The human
XX cardiovascular system associated nucleic acids and polypeptides are used
XX to prevent, treat or ameliorate a medical condition (for example in
XX humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep), for
XX example autoimmune diseases such as rheumatoid arthritis,
XX hyperproliferative disorders, for example neoplasms of the breast or
XX liver, cardiovascular disorders, for example cardiac arrest,

XX PT Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or ubi-quinone.

XX PS Disclosure; SEQ ID NO 5350; 872pp; English.

XX CC The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an anti-inflammatory steroid and ubi-quinone. A composition of the invention has anti-inflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytosolic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an anti-inflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubi-quinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition.

XX CC Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX PT Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and bronchodilating agent.

XX PS Claim 15; SEQ ID NO 5350; 763pp; English.

XX CC This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, anti-inflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytosolic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of

 XX
 XX The invention relates to formamidopyrimidine-DNA glycosylase 11.77
 CC (ABP58836) and nucleic acids encoding it (ABZ57439). The protein has a
 CC molecular weight of 11.77 kD. The invention also relates to a method for
 CC the recombinant production of the protein, an antagonist of the protein,
 CC and the use of the protein, gene and antagonist in therapeutic
 CC applications. Formamidopyrimidine-DNA glycosylase 11.77 can be used in
 CC the treatment of a variety of diseases such as malignant tumours, blood
 CC diseases, HIV (human immunodeficiency virus) infection, immune disorders
 CC and inflammatory conditions. The present sequence represents cDNA
 CC encoding formamidopyrimidine-DNA glycosylase 11.77

PT New polynucleotides comprising sequences assembled from expressed

PT sequence tags (ESTs), useful for treating cell-proliferative,
PT neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or platelet
PT or coagulation disorders.
XX
XX Claim 1; SEQ ID NO 392; 1012pp + Sequence Listing; English.
XX
XX The invention relates to an isolated polynucleotide (I) comprising a
CC nucleotide sequence selected from any of 948 sequences (ABZ11119-
CC ABZ12066) or their mature protein coding portion, active domain coding
CC protein or complementary sequences. The polynucleotides are useful for
CC identifying expressed genes or for physical mapping of human genome. The
CC encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight
CC markers, as a food supplement, for generating antibodies, in medical
CC imaging, screening and diagnostic assays and for treating cell-
CC proliferative disorders (cancer), neurodegenerative diseases (Parkinson's
CC or Alzheimer's disease), autoimmune diseases (multiple sclerosis,
CC diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,
CC platelet or coagulation disorders, wound, burns, incision, ulcers, liver
CC or lung fibrosis, infections (bacterial, viral, fungal, parasitic),
CC arthritis, etc. Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT useful for diagnosing and/or treating conditions associated with aberrant
PT activity of the arginine-rich polypeptides, such as cancer and
PT inflammation.
XX
XX Disclosure; SEQ ID NO 392; 51pp; English.

XX			The invention relates to an isolated polynucleotide. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the arginine-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutations responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel human arginine-rich protein cDNA.

New Proteus mirabilis polypeptides and polynucleotides, useful as
reagents for diagnosis of bacterial disease, as components of
antibacterial vaccines, as targets for antibacterial drugs, or as
biocontrol agents for plants.
XX
Disclosure; SEQ ID NO 1420; 870pp; English.
XX
The invention relates to new Proteus mirabilis polypeptides and
polynucleotides. The invention also relates to antibodies against the
polypeptides, methods for producing the polypeptides, a method of
generating vaccines for immunising an individual against P. mirabilis, a
method for evaluating a compound for the ability to bind a P. mirabilis
polypeptide and a method for screening test compounds for anti-bacterial
activity. The polypeptides and polynucleotides are useful as molecular
targets for diagnosing, preventing and treating pathological conditions
resulting from bacterial infection, as reagents for diagnosis of
bacterial diseases, as components of antibacterial vaccines, as targets
for antibacterial drugs or as bio-control agents for plants. This
sequence represents a Proteus mirabilis polynucleotide of the invention.

XX CC
CC This sequence encodes the novel interleukin-3 (IL-3) of the invention.
XX CC
CC This sequence was isolated from the human foetal liver-spleen tissue cDNA
XX library b2HFLS20W. The IL-3 polypeptides are useful in vitro for
XX stimulating growth and activation of bone marrow and blood cells before
XX infusion of these cells into patients. They can be used to treat various
XX immunodeficiencies (e.g. resulting from viral infection) or immune
XX disorders (e.g. rheumatoid arthritis) or other conditions in which
XX haematopoietic cell populations have been reduced/destroyed e.g. due to
XX radiation or chemotherapy. They are especially useful to activate mature
XX myeloid and/or lymphoid cells and especially to treat leukopaemia. The
XX polypeptides can also be used to stimulate differentiation in
XX haematopoietic precursor cells, especially haematopoietic stem or
XX progenitor cells, lymphoid cells or myeloid (especially monocyte) cells,
XX e.g. the differentiation of haematopoietic precursor cells into dendritic-
XX like cells. This is useful in vivo to increase the number of dendritic-
XX e.g. to treat pathogenic infections, autoimmune diseases and in
XX transplantation; in vitro production of dendritic cells is useful
XX clinically (e.g. in vaccine development) since isolation of these cells
XX from tissues is difficult. IL-3 can be combined with a carrier in
XX compositions useful as above, and used to generate antibodies useful in
XX assays and therapeutically. The polynucleotides are useful e.g. as
XX hybridisation probes, as oligomers for PCR, for chromosome and gene
XX mapping and for polypeptide production

XX Claim 14; SEQ ID NO 18427; 1766pp; English.

CC The invention relates to an isolated nucleic acid comprising any one of
 CC the 6213 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of

CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-required gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC compound's activity; (11) a culture comprising strains in which the gene
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target
 CC prokaryotic essential genes. Note: The sequence data for this patent did
 CC not form part of the printed specification, but was obtained in
 CC electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

XX
XX Predicting at least one toxic effect of a compound, useful for toxicity
PT modeling, comprises preparing a gene expression profile of a tissue or
PT cell sample exposed to the compound, and comparing the gene expression
PT profile to a database.
XX
XX Example 4; Page; 446pp; English.
XX
XX The invention relates to a novel method of predicting at least one toxic
CC effect of a compound. The method comprises a gene expression profile of a
CC tissue or cell sample exposed to the compound, and comparing the gene
CC expression profile to a database comprising at least part of the data or
CC information given in the specification. The methods are useful for
CC predicting at least one toxic effect of a compound, predicting the
CC progression of a toxic effect of a compound, predicting the renal
CC toxicity of a compound, or identifying toxicity markers in tissues or
CC cells exposed to known renal toxin. The genes are useful as toxicity
CC markers in drug screening and toxicity assays, in monitoring disease or
CC physiological states, or disease progression. This polynucleotide
CC represents a rat DNA sequence relating to the toxic effect database
CC described in the specification. NOTE: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from the World Intellectual Property
CC Organization

Site 2: NotI; The poly (A) + RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then decapped
with tobacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including EcoR
I site by treatment of T4 RNA ligase and the first strand
cDNA was synthesized from oligo dt-selected mRNA by
priming with dt-tailed vector. The dt-tailed vector was
adjusted to have about 60nt. The cDNA vector was
circularized with E. coli DNA ligase after digestion of
EcoRI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
obtained cDNA vectors were used for transformation of
competent cells E. coli Top10F' by electroporation method.
The cDNA libraries constructed by this method are
full-length enriched cDNA library."

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
6601.f
For more information about this cluster, see

            /note="Vector: Express 1; Total and poly A+ RNA was
isolated from the indicated stickleback tissue, and a cDNA
library was constructed in the Express 1 plasmid vector by
Open Biosystems. First strand cDNA synthesis was primed by
with an 54 bp linker primer containing an oligodt sequence
preceded by a synthetic NotI site (first strand primer:
5'-GACTAGTTCAGATCGGAGCGCCGCC(T)25-3'). Following
second strand synthesis, cDNAs were made blunt at the end
corresponding to the original 5 prime end of mRNA, and
cloned directionally into the NotI and EcoRV sites of
Express 1. Note that the EcoRV site is typically destroyed
in the blunt end cloning, leaving a junction of the form
'xxxATC' (where ATC is the second half of the EcoRV
site, and xxx is derived from the cDNA sequence). A map of
the Express 1 vector is available at:
http://www.openbiosystems.com/cdna_library_construction.fa
q.php#8 The primary library was transformed and amplified
in DH10B (T1 phage resistant) bacteria. Clones available

 An Arabidopsis full-length cDNA library was constructed essentially
 as reported previously (Seki et al., 1998). cDNA cleaved with BamHI
 and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et
 al., submitted for publication) digested with BamHI and SalI. This
 site is in a modified pluscript vector. Please visit our web
 site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
 details.

   /note="Vector: lambda ZAP Express/pBK-CMV; Site_1: EcoRI
(5' adaptor); Site 2: XhoI (3' linker primer); The mixed
organ cDNA library was generated using the ZAP-cDNA method
by Stratagene. First strand cDNA synthesis was primed with
a 50 bp linker primer containing an oligo dT sequence
preceded by a synthetic XhoI site. 5 prime adaptors were
used containing an EcoRI cohesive end. The finished cDNAs
were inserted in to the ZAP express vector
unidirectionally in the sense orientation with respect to
the lacZ promoter of pBK-CMV. An amplified library was
prepared from approximately 3 million primary clones in
the lambda ZAP Express vector. In vivo excision was then
used to generate individual pBK-CMV phagemid clones for
EST sequencing."

LOCUS DN670301 1226 bp mRNA linear EST 29-MAR-2005
DEFINITION CFW55-G12.Y1d-s SHGC-CFW Gasterosteus aculeatus cDNA clone
CFW55-G12 5', mRNA sequence.

ACCESSION DN670301
VERSION DN670301.1 GI:61990358
KEYWORDS EST.
SOURCE Gasterosteus aculeatus (three spined stickleback)
ORGANISM Gasterosteus aculeatus

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Actinopterygii; Neopterygii; Teleostei; Euteleostei; Neoteleostei;
Acanthomorpha; Acanthopterygii; Percomorpha; Gasterosteiformes;
Gasterosteidae; Gasterosteus.

REFERENCE 1 (bases 1 to 1226)
AUTHORS Kingsley,D.M., Peichel,C., Balabhadra,S., Grimwood,J., Dickson,M.,
Schmutz,J. and Myers,R.M.

TITLE Expressed sequence tags from Gasterosteus aculeatus
JOURNAL Unpublished (2003)

COMMENT Contact: Grimwood, Jane

Plate: 55
High quality sequence start: 18
High quality sequence stop: 898.

FEATURES

source 1..1226
/organism="Gasterosteus aculeatus"
/mol_type="mRNA"
/strain="Conner Creek sticklebacks, WA USA"
/db_xref="taxon:69293"
/clone="CFW55-G12"
/sex="mixed male and female"
/tissue_type="gills"
/dev_stage="adult"
/lab_host="DH10B (T1 phage resistant)"
/clone_lib="SHGC-CFW"
/notes="Vector: Express 1; Total and poly A+ RNA was isolated from the indicated stickleback tissue, and a cDNA library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bp linker containing an oligodT sequence preceded by a synthetic NotI site (first strand primer: 5'-GACTAGTTCTAGATCGGACGCGCCCTT)25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NotI and EcoRV sites of Express 1. Note that the EcoRV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxATC' (where is ATC is the second half of the EcoRV site, and xxx is derived from the cDNA sequence). A map of the Express 1 vector is available at: <http://www.openbiosystems.com/cdna> library construction fa q.php#8 The primary library was transformed and amplified in DH10B (T1 phage resistant) bacteria. Clones available from Open Biosystems: <http://www.openbiosystems.com/stickleback>"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
